EDUCATION

A.P.S.I.T , Kasarvadavali — *B.E - Computer Eng.*

2024 - 2028.

GPA – 8.55

PROJECTS

LCNum – LeetCode Problem ID Redirect Service

Built a lightweight, edge-deployed redirect service that maps
LeetCode problem IDs to their problem pages. Created to solve a
personal friction point with remembering slugs, and implemented
using Cloudflare Workers and Workers KV for fast, read-only lookups
with zero runtime writes.

GNOME Shell Extension - "Restart Into"

Developed an open-source GNOME Shell extension using JavaScript/GJS
and GTK that enables one-click restart to other OS from Linux on
Multi-boot systems. Built automated EFI boot management integration,
cross-platform compatibility (X11/Wayland), user preferences interface,
and bash installation scripts with passwordless sudo configuration.

Gnome Bang Search

Gnome Bang Search brings DuckDuckGo-style !bang search shortcuts to
GNOME Shell. Define configurable bangs that route queries to Google
directly from the overview, enabling fast, keyboard-driven searches.

SKILLS AND TOOLS

Language:
Python

Computer Science:
Data Structures & Algorithms

Cloud / Edge Computing:
Cloudflare Workers, Workers KV

Backend / Systems:
Linux, Bash

Tools:
Git, GNOME Shell Development, GTK
